# PlusBox 341 Quick Start Guide: ISDN Mode

#### Note:

Before you can use Anlagen-Anschluss Plus, you need to activate and to configure PlusBox 341. Detailed instructions on how to achieve this are available at **www.vodafone.de/aaplus-support**.

## **Connecting devices**

Connect PlusBox 341 as follows with the telephone socket (TAE) and with your ISDN PBX, for ISDN Voice + Data additionally with your network devices (further details see Chapter 2 of the user manual):

### Setting up the configuration computer for DHCP

The computer you want to use to configure PlusBox 341 must obtain its IP address dynamically via **DHCP** (Dynamic Host Configuration Protocol). This is the **default setting** which is preassigned to most computers. If this is not the case with your configuration computer, configure it using the following **TCP/IP properties** (details see Section 5.1 of the user manual):

Parameter	Selection
IPv4 address	Obtain an IP address automatically
DNS server address	Obtain DNS server address automatically

### Activating and setting up PlusBox 341

- 1. Connect one of the **ETH 0/0 to ETH 0/3 ports** of PlusBox 341 via the yellow LAN cable with a LAN port of your configuration computer if you have not already done so.
- 2. Open the Internet browser and enter http://192.168.2.1 or plus.box.
- 3. Enter Username and Password (see PlusBox 341 underside), confirm with Log in:

- 4. Follow the instructions of the **activation wizard** that opens, enter the 22-digit **Modem Installation Code** (MIC) from your welcome letter, click **Continue** and continue following the wizard's instructions.
- 5. On the Setup page, Skip configuration storing option and continue following the wizard's instructions.

Exclusively for ISDN Voice + Data: switch on (move slider to the right) and set up WiFi network:
Exclusively for ISDN Voice + Data: enter WiFi Name, choose protection mode WPA2 PSK (recommended) and Band Selection, then change WiFi Password (in the window popping up).
